

£750

+VAT

Includes:

Radio Health Checks

Battery Testing

Coverage Checks

User Training

Infrastructure Checks

Hire one of our technical engineers to visit your site.

Benefit from having one of our experienced Technical Engineers visit your site to check the condition and performance of your radio system.

For a one off cost from **£750 +VAT** our engineers can carry out general testing and servicing of your radios and onsite infrastructure without you having to send your equipment away.

During your onsite service visit our engineer can:

- Check radio programming and channel configuration
- Test battery capacity and overall battery health
- Carry out a general health check of each radio
- Perform radio coverage checks across your site
- Provide user training and best practice guidance
- Inspect repeaters, chargers and onsite radio infrastructure
- Diagnose faults and any workshop repairs where required

Keep your radio system working reliably

A service visit gives you a practical overview of the condition of your radios and infrastructure. Our engineer can identify potential issues and check that your equipment is set up correctly while providing advice and training where needed.

Please note: Our onsite Service Visit **does not** include radio repairs or the replacement of parts. If a unit is found to be faulty and requires extensive repairs, it may need to be removed from site and returned to our workshop for repair. Any workshop repairs will be quoted separately before work is carried out.
